

Sutter-Yuba Counties

CURRENT SETTING

The Counties of Sutter and Yuba define one of the smallest Metropolitan Statistical Areas in the State of California. The region currently has a population of 138,600 residents. Total wage and salary employment as of April 2000 stood at 41,400 workers, 13 percent of which are in the farm sector. The creation of jobs advanced 5.1 percent in 1999, compared to 2.8 percent for the state of California.

FORECAST SUMMARY

- Real per capita personal income is expected to grow from an estimated \$20,056 in 1999 to \$28,178 in 2020, at an overall average rate of 1.6 percent a year.
- Real taxable retail sales are forecast to increase from an estimated \$900 million in 1999 to \$1.35 billion (1999 dollars) in 2020. This growth in inflation-adjusted retail sales amounts to an average annual increase of 2.0 percent overall, with faster growth rates averaging 3.7 percent per year for the first four years of the forecast.
- Total wage and salary employment is forecast to grow by an average annual rate of 2.2 percent from 2000 through 2020. Most of this increase is expected to be in the services sector, which is forecast to increase from 8,200 jobs in 1999 to 17,500 in 2020. As a result, this sector is expected to account for 26.1 percent of all wage and salary employment in 2020, up from 19.3 percent in 1999.
- Overall net migration to the region is expected to remain positive each year of the forecast, averaging 750 more in-migrants than out-migrants a year. Net migration is forecast to be concentrated in Sutter County, however, where the average level is 1,001 persons per year.
- By contrast, the net migration to Yuba County would be negative, at an average of 245 more out-migrants than in-migrants each year. The forecast is consistent with recent history and a trend change is not expected over the longer term.
- The average number of persons per household is forecast to increase from 2.79 in 1999 to 2.87 in 2020, still short of the 2.90 persons per household that were measured in 1990.

EMPLOYMENT

During 1999, the region created 1,183 new non-farm wage and salary jobs, and 972 farm sector jobs. This year the MSA is creating jobs at an even faster pace, averaging 5.5 percent during the first four months of 2000. After 2000, job creation is forecast to slow, averaging 800 to 1000 new jobs per year from 2001 to 2004. The principal sector of growth over the next 10 years is the government sector. More than 4,800 new jobs will be created in the public sector, together with 4,000 new service sector jobs by 2010.

The longer term forecast of job growth produces an average of 1,000 to 1,200 new jobs per year. Most of these new jobs are in the services industry. Employment growth in services is forecast to remain strong (at more than 3 percent per year) during the 2010—2020 period. An aging baby boomer population together with a growing school age population will place greater demands on healthcare and education services.

Farm employment is expected to decline from an average of 7,800 full time workers in 2000 to 6,900 in 2010. However, a turnaround in Farm employment is projected

during the last ten years of the forecast. Employment gains are likely to be modest because labor saving technologies will characterize California agriculture over the longer-term forecast.

Construction employment is forecast to rise an average of 1.5 percent per year. That translates into less than 50 new positions per year, over the forecast. Retail and wholesale trade employment will also increase but only at modest rates in the near term future.

INCOME

Personal income grew 6.7 percent in 1999, and per capita income rose 5.9 percent. Adjusted for inflation, per capita income improved 3.7 percent in 1999. Nevertheless,

per capita personal income lags the statewide average considerably. The 1999 per capita rate in the Sutter-Yuba region averaged \$20,056. For all Californians, the 1999 per capita average was \$28,301.

Total personal income is forecast to rise an average 6.1 percent per year between 2001 and 2010. The wealth position of the population is expected to generally improve in the future, though it will lag the average wealth position for all persons in the state of California. Inflation adjusted per capita income is expected to grow 2.2 percent per year between 2000 and 2010, and just less than one percent per year in the 2011 to 2020 period of the forecast.

Growing personal incomes will translate into modest increases in the rates of personal consumption. The retail

Note: Historical data is shown for the years 1990 to 1999; forecasts begin in the year 2000

markets are expected to remain healthy as income positions continue to improve in the region. Real retail sales are forecast to rise 2.2 percent per year between 2000 and 2010, and 1.4 percent per year between 2010 and 2020.

HOUSING AND DEMOGRAPHICS

Net in-migrating population is forecast to remain positive over the forecast, despite the recent estimates of net out-migration from the region in 1996, 1998, and 1999. An annual average of 715 new in-migrants is forecast for the region between 2000 and 2010, and 800 new in-migrants per year between 2011 and 2020. Population growth remains at an average 2.0 percent per year during the 20 year forecast.
